

## KinderTrack4 Release Notes

Version: 4.0.18.2.3

SPR #	State	Problem	Solution
<b>Standard Fixes</b>			
20584	NY	When performing a search for a Parent, and selecting the Family status of Application, the system returns an error.	Corrected an issue with the stored procedure used for searching.
20604	NY	When printing a Denial Notice, the Allowed Amount is not always correct.	Corrected an issue with the Notice stored procedure.
20612	NY	When printing an Incomplete File Notice, the letter is not always printing items that were set to Required as a default status.	Corrected an issue with the stored procedure used to pull items for the notice.
20679	NY	The amounts displayed in Audit History on the income page are incorrectly being divided by 100.	Corrected an issue with the stored procedure used to get the values for income history.
21346	NY	When printing a Delinquent Family Share notice, the amount entered in the Past Due Amount field is rounded down to the whole dollar.	Corrected an issue with the stored procedure used to save the information for the notice.
43285	None	When making an adjustment to a paid payment, the calculated amount would never show an amount less than zero.	Made a change to the payment calculator that allows payment adjustments to be a negative amount.
43399	NY	If a payment is calculated, and then is set back to the Not Calculated status, the system is saving the calculated payment information. This causes issues with family fees/additional family fees when calculating other payments for children in the same family.	Modified the stored procedure that saves the payment status so that it removes payment calculation data when setting a payment back to Not Calculated.
43655	NY	The BICS Export report was not displaying records if the provider rates changed during the billing cycle.	Modified the report stored procedure to handle this situation.
