KinderTrack Release Notes

Version: 4.0.18.2.7

SPR #	State	Problem	Solution
Standard Fixes			
20319	NY	When an operator assigned to multiple office locations prints a Childcare Certificate, the system may not print the correct office location information on the certificate.	Corrected and issue with the report.
20452	NY	Provider records cannot be deleted.	Modified the stored procedure used to delete provider records. A provider record can be deleted if there have never been any children authorized for care at the provider.
20722	NY	The system reports an error when trying to print timesheets that have a disclaimer that contains quotation marks.	Corrected an issue with the report.

KinderTrack4 Release Notes

Version: 4.0.18.2.7

SPR #	State	Problem	Solution
Standard Fixes			
20332	NY	When clicking on the Absence button on the Child page, the system stops responding.	Corrected an issue with the stored procedure used to calculate absence numbers.
20374	NY	Users cannot delete operator records.	Modified the stored procedure used when deleting operators. An operator can now be deleted if they are not associated with any history record other than an initial login.
20577	NY	In certain instances, when creating a user in a region and assigning just the Local District Admin role, that user cannot view the Office Locations and Operator Roles fields for other operators.	Corrected an issue with the stored procedure used to display Office Locations and Roles.
20610	NY	In certain situations, the data on the Childcare Subsidy Certificate is duplicated per child.	Corrected an issue with the report.
20737	NY	Notices that are created, but not authorized, for a time period that includes paid payments cannot be deleted.	Modified the stored procedure used for deleting notices to use the status of the notice when determining if the notice can be deleted.
20804	NY	When trying to create a Child Aging alert from the Admin section, users get an error message stating the alert cannot be created.	Corrected an issue with the alert stored procedure.
20904	NY	In certain situations, a payment in an Authorized status cannot be set to Paid status from the Payment Summary screen. These same payments can be set to Paid from the Payment Processing page.	Corrected an issue with the stored procedure used on the Payment Summary page to set payment status.
42337	NY	After changing a providers type of care from one type to another and authorizing the change on the schedule, the payment screen is still showing the old type of care for the provider. This was a display issue only; the payment used the current type of care when calculating the payment.	Corrected an issue with the stored procedure used to display the type of care for a provider on the payment page.
43111	NY	When creating payments for days that are set as Modified Days, the payment should use the Absence Code listed in the modified day record, and should follow the parameters defined in the attendance code. For example, if the Absence Code is Holiday, and Holiday is set to be paid, the payment should treat that attendance code the same way it would if the operator entered it by hand.	Corrected an issue in the stored procedure used to record attendance based on Modified Days.
43577	NY	If a family income is less than \$5.00, the \$1.00 minimum family fee for income based programs is not calculated properly.	Corrected an issue with the stored procedure used to determine family fees.
43723	NY	From Reports > Print queue, when searching for timesheets and not selecting a provider type, the system returns more records than the same search with selecting all types of care.	Modified the stored procedure used when searching for timesheets. The system will now return all timesheets for the selected provider type/date range/status combination when searching for timesheets.

Version: 4.0.18.2.7

SPR #	State	Problem	Solution
43981	NY		Nassau Only: Corrected an issue with the Auto Calculation job that caused care ending at 12:00 AM to calculate using a negative number of hours.
43983	NY		Nassau Only: Modified the Cumulative Report to show the service type even if the payline has been previously exported.
