

KinderTrack4-NY Release Notes

Version: 4.2.13

SPR #	State	Problem	Solution
Standard Fixes			
59299	NY	In certain situations, the system would produce attendance sheets for the same time period for the same child/provider combination.	Added additional logic to the stored procedure to ensure that overlapping attendance sheets are not created.
60492	NY	In certain situations, the CCFS Not Payable flag was not being cleared when a payment was set to Paid status.	Corrected an issue with the stored procedure used to clear the flag during the payment process.
63013	NY		Added the hourly label H: to the After Hours section of the Provider Authorization Letter.
63123	NY	In certain situations, the provider Type of Care displayed on the Payment Page did not match the type of care being used for a payment. This could happen when a providers type of care was changed after the payment was created. This was a display issue only; there were no payments incorrectly calculated.	Modified the stored procedure used to display the provider Type of Care on the Payment page.
63268	NY	In certain situations, the Payment screen may show a family fee amount for the payment, but the calculation does not include the fee. This typically happens when the fee assignment is switched from one child to another. This was a display issue only; there were no payments calculated incorrectly.	Modified the stored procedure that is used to display the family fee amount on the Payment page.
63381	NY	There was a discrepancy in the logic used for WPI 2045 - Child Age Exceeds Program Age Limit, and the business rule that does not allow a child to be authorized for child care after the program age limit. The WPI would fire if the schedule ended on or after the day the child reached the program age limit. The business rule would fire if the schedule ended on or after the age limit, plus one day.	Modified the logic in the Business Rule so that it will not allow schedules that end on or after the day that a child reaches the program age limit.
