KinderTrack4-NY Release Notes

Version: 4.2.5

SPR #	State	Problem	Solution
Standard Fixes			
45677	NY	When checking the Show RMR checkbox on the Payment page, the RMR rates that are displayed are not always the rates used in the payment calculation. This happens when the provider is in a different RMR region than the district calculating the payment. CAS-01702-J7Q1N	Modified the Show RMR section of the Payment page so that it used the county that the provider is located in, not the district of the person calculating the payment.
50354	NY		Corrected a page navigation issue on the Admin > RMR page that would cause the page to stay in History mode.
50377	NY		Corrected an issue with the Family Summary Report that could cause blank reports when there should be data returned on the report. CAS-02089-C3T3W
50389	NY	Several Counties have had profiles with duplicate names; Standard, Default, etc. This has caused problems when selecting the profile while creating schedules, which leads to Notice and Payment issues.	Added a business rule that does not allow a Profile record to be saved with a duplicate name. This will ensure that workers modify an existing profile instead of adding a duplicate.
50396	NY	In situations were a family is not effective as of the date that a worker is trying to back date a schedule to, the system throws an error and then does not allow them to continue. CAS-02091-V3Z1H	Added a business rule that ensures that the family is active as of the new start date of the schedule. If not, the system will let the worker cancel, and then correct the issue.
50426	NY	In some situations were notices are effective in the future, the Status of the notice is displayed incorrectly on the notice page. This is a display issue only, and the notice actions are correctly applied regardless of the status displayed. CAS-02093-L6B1V	Modified the stored procedure used to determine the status of a notice.
50454	NY	In situations where only child income is used, and the notice has a future effective date, the income amount may be incorrect on the notice. CAS-02098-G6K1J	Corrected an issue with the stored procedure used to get income amounts for notices.
50459	NY	In certain situations, the payment characteristics and amount for overridden payments were not being saved correctly. This caused the characteristics and amount to not display properly. CAS-02099-X2S4R	Corrected an issue in the stored procedure used when saving overridden payments.
50468	NY	In Onondaga County only, there are situations were a change in family fee would take effect on a date other than the notice effective date. This happened when a notice was created with one effective date, and then the effective date is changed.	Modified the custom Onondaga Notice to always use the Notice Effective date for the Family Share date.
50564	NY		Corrected an issue with the Provider GIS Coordinates report that would cause the report to not print.

Version: 4.2.5

SPR #	State	Problem	Solution
50570	NY	When calculating payments, users have the ability to check a flag called "Override Weekly Limit" to override the max hours per week in a schedule and pay any additional hours that may exist over the max hours. Currently, when copying attendance from one sibling to another on the Payment>Payment screen, that flag does not remain checked for the second child, if it was checked for the first child.	Modified the copy function so that if the Override Weekly Limit box is checked, it will be copied and set on the new payment.
50713	NY	In certain situations, when calculating the second half of a split week payment where the provider type or profile has changed, the system cannot determine what rates to use.	Modified the payment calculator so that it will now get the correct rate type in this situation.
50734	NY	If a district modifies settings on the Admin > District Settings page, saves it with a new effective date, and then deletes the previous record, the system throws an Unhandled Exception error.	Modified the stored procedure used for deleting records on that page.
50747	NY		Corrected an issue with the payment calculator when the Additional Family Fee amount is $0.00.
50759	NY	In situations where a provider changes RMR regions in the middle of a payment, the system uses the RMR region as of the beginning of the payment for the whole billing period.	Modified the payment calculator to get the RMR region for the provider as of the first paid day of each week.
51917	NY	When trying to view adjusted payments where the Additional Family Fee Description was longer than 20 characters, users received an error message.	Increased the database field size to 50 characters to correct a field size mismatch for the Additional Family Fees Description.
51962	NY		Modified the CSOS Application Import logic to exclude matches on blank case numbers.
