

KinderTrack4-NY Release Notes

Version: 4.2.7

SPR #	State	Problem	Solution
Standard Fixes			
52465	NY	WPI 2080 fires in two scenarios. 1. If there is a School Calendar selected, but no hours are entered for School and 2. If there are School Hours entered, but no School Calendar is selected. The WPI message only mentions scenario 2.	Modified the WPI message to say: "School Hours without a calendar or a School Calendar without hours will result in no authorization on school days and potentially zero dollar payments"
53651	NY		Implemented settings and fields for Attendance Sheet Scanning. Districts should review the NY CCTA User Guide - Phase IV Timesheet Scanning document for more details.
53805	NY	When creating a varying Parent Need, if Max Daily Hours are entered without Max Weekly hours, upon saving the system sets the Max Daily Hours to zero.	Corrected an issue with the field used to display Max Daily hours.
54887	NY		Implemented Change Request 401. CCTA Operator records can now accommodate multiple Worker Units, separated by a comma. For example SC076,FCB76. The CSOS import was also modified to look for the combination of Worker Number and each of the Worker Units when assigning CCTA workers to cases.
54911	NY		Corrected an issue with applying the Weekly Max hours to over midnight payments, when the first day of the billing period is a Monday.
54939	NY		Corrected an issue where Provider RFI documents that were setup to only display for one provider type were being shown for all provider types.
54959	NY	For set schedules using the Absolute limit, payments with times ending at 12:00 AM were subtracting one minute from the daily total.	Corrected an issue where schedules using an Absolute limit were not correctly handling 12:00 AM as an out time.
54989	NY		Corrected an issue so that attendance sheets do not print for any period of time that a provider is Inactive.
55092	NY	In certain situations when saving a schedule, WPI 2043 - Hours Fall Outside Provider's Hours fires even though the provider is open during the scheduled time.	Corrected an issue with the WPI logic when a provider has multiple open hours per day, for example before and then after school, and an authorization also has multiple times per day.
55128	NY	If day one does not have time a time pair that ends at 12:00 AM, and day two starts at 12:00 AM, the system is moving day twos time to day one.	Modified the payment calculator to better handle over midnight situations for schedules with Absolute limits set.
55232	NY	In situations where an over midnight payment occurs that spans the first day of the Payment Details report, the amounts on the report will not match the Total Amount from the Payment Search page for the same date range.	Modified the stored procedure used for the report so that it correctly reports the amount for the first day.
