

## KinderConnect Release Notes

Version: 2.0.17

SPR #	State	Problem	Solution
<b>Standard Fixes</b>			
47669	NY	The system displays an Attendance Saved message on screen after attendance is saved. In some browsers, this message is still displayed after moving to another attendance page.	Added a timer to the toolbar control that clears the message after two seconds.
52163	NY	Providers have reported that the system times out when trying to submit attendance. This was due to the system choosing a bad SQL execution plan.	Added query hints to keep the system from choosing the bad SQL execution plan.
52246	NY		Implemented the changes and enhancements listed in section 3.3 of the Phase IV proposal. See the User Guide for more information.
52410	NY	If a role does not have permission to edit attendance, the system does not display the Save button on the Enter Attendance screen so that attendance cannot be saved. This can be circumvented if the operator enters attendance and moves to the next week, triggering the Auto Save feature.	Modified the Auto Save functionality to check the permissions associated with the role of the operator, and not auto save if they do not have edit permissions on attendance.
