

KinderConnect Release Notes

Version: 2.0.24

SPR #	State	Problem	Solution
Standard Fixes			
62827	NY	On the Sponsor Detail page, when searching for children, the child search screen would show duplicates of a child if that child had multiple effective dates with different dates of birth.	Modified the stored procedure used to search for children on the Sponsor Detail page so that it always looks at the current child record.
63389	NY	The original list of secret questions used to validate users contained some that could have multiple answers. This caused an issue when a user called support, and then supplied multiple answers to the question.	Removed the generic questions and replaced them with questions that have more specific answers. Users whose profiles contained one of the questions that have been removed will be required to choose a new question and supply a new answer upon their next login.
